HOME CARE INSTRUCTION FOR WART SURGERY

Leave the dressing on for three to four hours following surgery. Some bloody drainage will be seen. You may take the dressing off this evening.

Starting tonight soak a cotton ball with hydrogen peroxide and place on area for about 5 minutes. Pat dry and apply Neosporin to area and cover with band-aid. This should be done twice a day for about 5 days.

If you have any questions or problems before you follow-up visit, please do not hesitate to contact our office or call our emergency number at (314) 719-9709

Please Note: The excised wart will be sent to a pathology laboratory for examination. The pathology laboratory charges for this service and they will bill you or your insurance for this service.
